

Windows Users

First-Time Setup

1. Open the folder launchers/windows/.
2. Double-click setup_windows.bat.
3. A black setup window will open. Let it finish.
4. If it installs Python or Node.js and asks you to run setup again, close the window and double-click setup_windows.bat again.
5. When setup is complete, you should see "Setup complete."

Starting the Tool on Windows

1. Open launchers/windows/.
2. Double-click start_pnc_tool_windows.bat.
3. Two black windows may open: one for the backend and one for the frontend.
4. A browser window should open automatically.
5. Use the browser page to select the country, university, and job posting.

Do not close the black windows

Keep the backend and frontend windows open while using the tool. Closing them will stop the tool.

Stopping the Tool on Windows

1. Open launchers/windows/.
2. Double-click stop_pnc_tool_windows.bat.
3. Wait until the stop window says the tool has stopped.

Mac Users

First-Time Setup

1. Open Terminal.
2. Go to the main PnC-Automation-Tool folder.
3. Run this command once: `chmod +x launchers/mac/*.command`
4. Open launchers/mac/.
5. Double-click setup_mac.command.
6. Let the setup finish.

If Mac blocks the file

Right-click the .command file, choose Open, then confirm. This may only be needed the first time.

Starting the Tool on Mac

1. Open launchers/mac/.

2. Double-click start_pnc_tool_mac.command.
3. A terminal window will open.
4. A browser window should open automatically.
5. Use the browser page to select the country, university, and job posting.

Keep Terminal open

Keep the terminal window open while using the tool. Closing it will stop the tool.

Stopping the Tool on Mac

1. Open launchers/mac/.
2. Double-click stop_pnc_tool_mac.command.
3. Wait until the stop window says the tool has stopped.

Daily Usage Workflow

1. Start the tool using the correct Windows or Mac startup file.
2. Wait for the browser page to open.
3. Select the country.
4. Select the university.
5. Select the job posting.
6. Click Submit Application / Start Posting.
7. Wait while the tool opens the portal and fills the form.
8. Review the filled form on the portal.
9. Make changes if necessary and click Submit Posting for Approval on the portal.
10. Return to the tool and click Mark as Completed.
11. Stop the tool when finished.

Important Rules

- Do not rename folders.
- Do not delete files from the tool folder.
- Do not close backend/frontend windows while the tool is running.
- Always review the filled form before final submission.
- If something looks wrong, stop.
- Do not try to edit the code manually.

If Something Goes Wrong

Please send the following information:

- A screenshot of the error.
- The university/portal selected.
- The job posting selected.

- A screenshot of the black terminal or command window if there is an error.
- What step you were on when it failed.

Common Issues

Issue	What to Do
Browser did not open	Wait 10 to 15 seconds. If it still does not open, manually go to http://localhost:5173 .
Setup window closes immediately	Run the setup file again. If it still closes, send Aritro a screenshot or screen recording.
Python or Node.js installation message appears	This is normal during first-time setup. Let it finish. If asked, run setup again.
Page loads but no universities/jobs appear	The backend may not be running. Stop the tool and start it again.
Mac blocks the command file	Right-click the file, choose Open, then confirm.
